

# Large avalanche on Bridger Peak

Bridger Peak  
Bridger Range  
3/27/2023  
Code  
N  
Elevation  
10000  
Aspect  
E  
Latitude  
45.77010  
Longitude  
-110.94000  
Notes

Two large, widely [propagation](#) fractures visible through a hole in the cloud cover Monday A.M. from Bridger Canyon Dr. Upper [slab](#) failure evidently stepped down to a deeper layer estimated 400' below upper crown. Both crowns appeared to be similar depth. Also visible were debris toes further to the North that had run mostly full path. Looked like it was already covered up yesterday (tues).

A second ob via phone message:

A large natural avalanche occurred on the north summit of Bridger Peak yesterday (Monday, 27 March). The crown line was complex.
