

Small wind slabs in Wolverine, Bridgers

Wolverine Bowl

Bridger Range

3/6/2024

Code

Latitude

45.83010

Longitude

-110.93400

Notes

Toured up on the ramp yesterday. In wolverine bowl, another skier and I both popped small wind pockets (6" deep at the most) about half way done the slope on a north facing roll. We also saw lots of snow transport up high on the ridges all day, as well as some slight warming on direct south faces.
