

Natural Avalanches on Saddle Peak

Saddle Peak

Bridger Range

11/25/2024

Code

SS-N-R2-D2-I

Elevation

9100

Aspect

E

Latitude

45.79430

Longitude

-110.93600

Notes

Driving up Bridger Canyon this morning, we noted several natural avalanches in wind loaded terrain on Saddle Peak, the Football Field, and in Mundy's Bowl. All The avalanches seems to be a similar [wind slab](#) problem. They broke just below the [cornice](#) line. From a distance and considering yesterday's new snow, I would guess a foot deep or so (R2, D2, I)

Number of slides

1

Number caught

0

Number buried

0

Avalanche Type

Soft slab avalanche

Trigger

Natural trigger

R size

2

D size

2

Bed Surface

I - Interface between new and old snow

Problem Type

Wind Slab

Vertical Fall

600ft

Slab Width

350.00ft
