

Touchy storm slabs in Hyalite

Date

Fri, 01/24/2025 - 12:00

Activity

Ice Climbing

Very touchy storm slabs formed throughout the day. 6-8" deep by 3pm. low density snow/[slab](#) but very fast moving. We were able to [trigger](#) steep (35+) rolls with chunks of ice and even got one to go with a falling rope. We saw one natural (d1) that ran ~200' down a gully near mummy 2.

Region

Northern Gallatin

Location (from list)

Hyalite - main fork

Observer Name

R Griffiths
