

Windslabs on Blackmore

Date

Fri, 01/31/2025 - 12:50

Activity

Snowboarding

Wind was rocking in alpine today, fresh windslabs forming and naturally releasing. I could make out 3 on E face, but rough vis with blowing snow. Exposed terrain in alpine had about .5" ice crust from yesterday's sunshine.

This slab (in pic) released around 11-noon-ish.

Region

Northern Gallatin

Location (from list)

Mt Blackmore
