

Small wind slab avalanches on Saddle Peak

Saddle Peak
Bridger Range
3/19/2025
Code
SS-N-R1-D1-I
Elevation
9000
Aspect
E
Latitude
45.79430
Longitude
-110.93600
Notes

It looked like there were several small wind slabs triggered on Saddle Peak. I was skiing with my family and didnt get a good look or a photo. One appeared to be just off the summit maybe 12" deep and not running very far at all. The other appeared to be near the going home chute even with the cliffs, and this one ran a bit further. These wind slabs looked like something to be looking for but also easy to avoid.

Number caught
0
Number buried
