Thin Wind Slab Avalanche near Hardscrabble

Fairy Lake Bridger Range 4/9/2025 Code SS-N-R1-D1-I Elevation 9000 Aspect SE Latitude 45.90430 Longitude -110.95800 Notes

I rode into Fairy Lake. There was 2-3" of new snow above the elevation of Fairy Lake, a trace below. Winds were cranking at ridge top elevation, transporting what soft snow there was. Minimal hazard formation. I spotted one fresh <u>wind slab</u> avalanche near Hardscrabble. The <u>slide</u> ran several hundred feet in steep terrain but was very thin (R1,D1).

There was a mostly supportable crust below the new snow about 1" thick. The snow below the crust was moist.
